

its appearance that it was probably a *Pholiot* but if the spores were white, then it would be a *Leucopholiot*. She did the print for us and told us it was white, so with that, we were able to narrow it down to *Leucopholiot decorosa* the next week with *Mushrooms of Northeastern North America* and *MushroomExpert.com* the next week, 10-3-17.

The specimens didn't change much upon drying, except the gills turned a yellow-brown color.
